With Kane's Load Consolidation Program

If you're a mid-sized shipper with significant LTL freight, big savings could be possible through load consolidation. By combining LTL shipments from multiple companies into truckload shipments, overall LTL savings could range from 20% – 35% or even higher.

How it works

Kane is Able, a third-party logistics specialist for consumer packaged goods, is uniquely positioned to identify consolidation opportunities for CPG companies. We have a large base of CPG customers – many of whom ship to the same mass retailers. Using our proprietary **LoadCon** software, we examine customers' shipment requests. Where we find "matches" – orders that share similar ship-to destinations and arrival dates – **LoadCon** builds truckload shipments. The cost is divided among customers who have product on the truck.

Results

- 20% – 35% decrease in LTL freight costs
- More consistent, time-based delivery
- Less damage as goods avoid breakdown at multiple LTL hubs

Some freight may not be appropriate for load consolidation. But freight that can be shifted from LTL or partially loaded TL shipments to consolidated TL can result in substantial savings.

	Weight (lbs)	Cost of Individual Freight Move	Cost w/Kane LoadCon	LoadCon Savings	Percent Savings
Company A	15,000	\$550 (TL)	\$275	\$275	50%
Company B	12,000	\$550 (TL)	\$220.40	\$329.60	60%
Company C	3,000	\$306.21 (LTL)	\$165	\$141.21	46%

The best candidates for freight savings through load consolidation...

- Have a large number of LTL shipments or TL shipments that use less than 75% of TL capacity
- Can be flexible on ship dates to increase consolidation opportunities without missing requested arrival dates (RADs)

Can LoadCon work for you?

Sign up for our free assessment.

Just supply a representative sample of shipping activity, including to/from points and weight. We'll match that with shipments from our existing customers and report the savings potential.
